

ACTIVITY 7 — FACILITATOR GUIDE

Campaign Documentation Audit

TYPE	DURATION	MAPS TO	TOPIC
Case Study	25 minutes	LU2	LU2 — Customer Influence

Purpose of this activity

By the end of this activity learners will be able to document customer reception to the brand and the outcome of branding campaigns (LU2).

What learners produce

A PESO-sorted reception report for the pilot, with a metric per media type, gaps flagged, and a reusable documentation template.

Materials required

- Learner Worksheet (one per learner)
- Checklist (one per group)
- Flipchart or A3 sheet and markers
- The course slides for the scenario and framework
- Internet access where the activity calls for live research

Set-up

Groups of 3–5. Distribute one worksheet per learner and one checklist per group. All 17 activities run on the same continuous Nimbus Wellness scenario, so remind learners of where this activity sits in that story before you start.

Scenario / briefing material

Three months ago, before committing the full relaunch budget, the Marketing Lead quietly piloted a small "Behind the Jar" campaign — a short Instagram Stories series introducing the new sustainable-packaging story to a slice of the loyal-customer community, alongside one boosted post, a short unpaid write-up from a local lifestyle blog, and a supporting post on the Nimbus website.

Nobody kept a single, consistent record of how it performed. Some numbers live in a Marketing team member's spreadsheet, some in a Notion page nobody else can find, and the rest is only in people's memory of "it went pretty well." With the Board wanting proof that the full relaunch campaign works — not just louder impressions — that will not be good enough this time.

Your table's job is to reconstruct what actually happened to the pilot campaign across paid, earned, shared and owned media, and turn it into a documentation framework the team can reuse for the real relaunch three months from now.

How to run it — step by step

#	Instruction to learners	Facilitator note
1	List every element of the pilot. Reconstruct 'Behind the Jar' from the scenario: the Instagram Stories series, the boosted post, the unpaid lifestyle-blog write-up, and the Nimbus website post. Add anything else the scenario implies.	If a table puts the boosted post under Shared, use it to teach the Paid/Shared boundary — it is the most common PESO error in practice.
2	Define the four PESO categories. Paid = you bought the placement. Earned = someone else chose to cover you. Shared = social and community activity. Owned = channels you control. Agree these definitions before sorting, because the boosted post is the one people argue over.	Frameworks that require more than about five fields per campaign never get filled in. Push tables toward something realistically small.
3	Sort each element into a category. Place all four elements. The boosted post is Paid even though it lives on a Shared channel — the money decides the category. The blog write-up is Earned precisely because it was unpaid.	
4	Attach at least one metric per category. For each PESO category name the metric that would actually show customer reception, not just volume. Reach shows how many were exposed; saves, replies and sentiment show whether anyone cared.	
5	Mark the gaps honestly. Flag every category where the data does not exist or lives in someone's spreadsheet or memory. Being honest about gaps is the point of the audit — a report that hides its gaps cannot be trusted by the Board.	
6	Compare effort against reception. Note where the team spent the most effort versus where the strongest reception actually happened. A mismatch here is the most useful finding for the full relaunch budget.	
7	Draft the reusable framework. Design the template the team will fill in DURING the real relaunch: which fields, captured by whom, at what cadence, stored where. It must be simple enough that it actually gets filled in — that is the real design constraint.	
8	Choose the Board evidence. Select the single strongest piece of pilot evidence you would put in front of the Board to justify the relaunch PR budget, and say why it	

	is the most persuasive.	
--	-------------------------	--

Suggested timing

Minutes	Phase
3 min	Reconstruct what the pilot campaign actually consisted of
7 min	Sort every element into Paid, Earned, Shared, Owned
6 min	Attach at least one metric per media type
5 min	Mark the data gaps honestly
4 min	Draft the reusable documentation framework

Total: 25 minutes

Discussion & decision prompts

1. Sorting the pilot's activity into Paid, Earned, Shared and Owned media, where did the strongest customer reception actually happen — and does that match where the team spent the most effort?
2. Which pieces of the pilot's story are you missing data for entirely, and how would you close that gap before the full relaunch campaign launches?
3. What documentation framework would you standardise now, so results don't have to be reconstructed from memory again after the real relaunch?
4. Based on the pilot's results, what is the strongest evidence you would put in front of the Board to justify the relaunch's PR budget?

Debrief

Bring the class back together and draw out the learning:

- Ask two or three groups to show what they produced, not just what they concluded.
- Ask what surprised them — the gap between what they assumed and what they found.
- Link the activity explicitly back to LU2 — Customer Influence.
- Remind learners this activity rehearses what the Case Study assessment will require.

Reflection questions:

- Which of the four PESO categories was hardest to find any real data for — and what does that tell you about Nimbus's current documentation habits?
- Did the channel that felt most successful in the room match the channel the numbers actually supported?
- If the Board asked "how do we know this worked?" right now, could your documentation answer them convincingly?

Facilitator notes — what to watch for

- If a table puts the boosted post under Shared, use it to teach the Paid/Shared boundary — it is the most common PESO error in practice.
- Frameworks that require more than about five fields per campaign never get filled in. Push tables toward something realistically small.

Success criterion

Every group can show a PESO-sorted reception report for the pilot campaign with at least one metric per media type, the gaps in current data called out honestly, and a reusable documentation framework for the full relaunch.

Assessment link

This activity builds LU2 — Customer Influence. All 17 activities are in-class activities assessed indirectly through the open-book Case Study (CS) component, which reuses the same techniques on the same continuous Nimbus Wellness scenario. Knowledge is assessed in the Written Assessment (WA-SAQ). Nothing is assessed that is not practised here or taught in the slides.
